PROFESSIONAL SUMMARY

Senior Android Software Engineer with 7+ years of experience in Android development building high-scale consumer apps, including a published personal [Android app on Google Play Store](#). Proven track record delivering measurable impact — from 700K MAU IoT application to A/B-tested features that drove 32% conversion lifts. Deep expertise in Kotlin, Jetpack Compose, MVVM architecture, Kotlin Multiplatform, and Firebase. [AWS Certified Solutions Architect - Associate](#). Proficient in AI-assisted development using Claude Code, GitHub Copilot, ChatGPT, and MCP to accelerate delivery.

SKILLS

Languages: Kotlin, Java

Android Core: Android SDK, Android Jetpack (ViewModel, LiveData, Data Binding, Navigation, Paging Library, Room, Jetpack Compose, CameraX, Hilt, DataStore, MotionLayout, Notifications), MVVM, RxJava, Coroutines, Flow, Material Design 3, Kotlin Multiplatform (KMP)

Testing & Quality: JUnit, Robolectric, MockK, Espresso, A/B Testing

Cloud & Backend: Amazon Web Services (AWS), Firebase, Firebase Cloud Functions, Google Cloud, Google Cloud Vision API

CI/CD & Tooling: Git, GitHub Actions, Bitrise, Android Profiler, Retrofit, Ktor, Coil, ExoPlayer, Google AdMob, CleverTap, Postman, Proxyman

AI Tools: Claude Code, GitHub Copilot, ChatGPT, AI Agents, Model Context Protocol (MCP)

WORK EXPERIENCE

Senior Android Software Engineer

March 2024 – Present

[Electrolux Home Appliances Sdn. Bhd.](#)

Kuala Lumpur, Malaysia

- Managed the full app development lifecycle in an agile environment — from conceptualization through deployment and maintenance — successfully shipping 35 releases to ~700K monthly active users.
- Architected core modules of a 20+ module IoT application using Jetpack Compose and Kotlin Multiplatform, sharing 80% of business logic across platforms to reduce duplicate engineering effort.
- Improved app accessibility across 10+ screens by implementing semantics and enhancing the TalkBack user experience.
- Leveraged Claude Code, GitHub Copilot and the Figma MCP Server to accelerate the development and code review process for the geofencing feature.
- Presented newly built features in biweekly company-wide engineering sharing sessions over 2+ years, fielding technical questions from developers across teams.

Senior Android Software Engineer

March 2021 – March 2024

[Fave Asia Sdn. Bhd.](#)

Kuala Lumpur, Malaysia

- Built key features (Search, Nearby, Arcade) using 10+ Firebase Remote Configs for dynamic app control; ran ~5 A/B tests that drove a 32% increase in conversion rate.
- Integrated Google AdMob on the homepage, generating an additional S\$800 in monthly revenue.
- Deployed 15 deep links for precise in-app navigation, increasing user engagement by 24%.
- Refactored codebase from Java to Kotlin with Hilt dependency injection, reducing app size by 13% (72 MB → 63 MB).
- Expanded unit and instrumented test coverage, achieving 99.6%+ crash-free user sessions; implemented CleverTap for event tracking and analytics.

Android Mobile Engineer

September 2019 – December 2020

[Self-Employed \(Freelance\)](#)

Kuala Lumpur, Malaysia

- Diagnosed and resolved UI performance bottlenecks using Android Profiler, Layout Inspector, and overdraw analysis.

- Built robust networking and REST API integration layers with Retrofit and offline-capable data persistence with Room local database.
- Designed background execution pipelines for long-running tasks using Coroutines and RxJava.

Android Software Engineer

February 2019 – August 2019

[Advisory Apps Sdn. Bhd.](#)

Kuala Lumpur, Malaysia

- Developed a real-time messaging system serving 500+ MAU using LiveData and MVVM architecture.
- Integrated Firebase and SQLite for data persistence and offline access.
- Implemented a location-sharing feature combining Google Maps API, Foursquare API, and GPS for accurate real-time positioning.

Teaching Assistant – Data Structures & Algorithms

August 2018 – December 2018

[Iowa State University](#)

Ames, Iowa

- Wrote JUnit test suites used as grading rubrics for weekly programming assignments across 350+ students.
- Led weekly recitation sessions of 30+ students; graded exams and coached students on debugging and algorithm tradeoffs.

IT System Support Technician

June 2017 – December 2017

[Iowa State University \(IT Services\)](#)

Ames, Iowa

- Resolved software and hardware issues for customers in person, by phone, and via email.
- Collaborated within a 5-person team to maintain and troubleshoot computer systems and LAN/WAN/TCP-IP networks.

SIDE PROJECTS

OCR Note-Taking App

May 2016 – Present

[Personal Project on Google Play Store](#)

- Published an OCR Android app that leverages Google ML Kit, the Cloud Vision API, and Jetpack CameraX to recognize text from uploaded images.
- Implemented an automatic video thumbnail generator triggered on cloud uploads via Firebase Cloud Functions.
- Utilized Cloud Firestore and Firebase Storage to store application data and user photos.
- Integrated Coil and ExoPlayer for efficient image/video loading, caching, and playback with a smooth UI/UX.

EDUCATION

Iowa State University December 2018

Ames, Iowa

Bachelor of Science in Computer Science

GPA: 3.12 / 4.0, Dean's List: Spring 2016, Fall 2017

Relevant Coursework: Principles of Artificial Intelligence, Software Testing, Design and Analysis of Algorithms

AWARDS & ACHIEVEMENTS

- Second Place (out of 21 teams) — ACM North America Regional Programming Contest, Iowa State University (November 2018)
- Built a text-detection app using an OCR library to search specific text across multiple photos — Hackathon project (September 2016)
